

DISCOVER THE POWER — INTALOGIX® TECHNOLOGY

Thurman's Intalogix Technology Conversion Kit

SHIELD YOUR SCALE FROM POWER SURGES AND LIGHTNING STRIKES WITH THURMAN SCALE'S EXCLUSIVE INTALOGIX® TECHNOLOGY

As you may know, your scale is constantly under siege. The enemy — a voltage surge or lightning strike — can hit at any time and seriously damage your weighing system's load cells, instrumentation and support electronics.

Fortunately, you do not have to stand idly by and wait for this to happen. You can fight back by protecting your scale with Intalogix Technology, a unique defense system from Thurman Scale. Intalogix Technology works with most scale applications and is specially engineered to isolate and guard your scale from dangerous power surges and lightning strikes.

Intalogix protects your scale in ways other systems cannot. The heart of this technology is a true digital signal that is up to one million times stronger than a conventional analog signal. Intalogix Technology uses its powerful signal to stay in constant communication with your scale's individual load cells, instantly detecting any abnormality or deviation in performance.

Should a problem be found with a load cell or other electronic component, Intalogix Technology sends an alert that specifies where the trouble is located.

Another benefit of Intalogix is its optical load cell isolation. This unique isolation method creates a surge-stopping barrier between your scale's load cells and its supporting electronics — suspending the load cells safely away from harmful surges and electrical spikes.

As a second line of defense, Thurman instruments with Intalogix Technology boast an electrical isolation design. This method of isolation ensures that surges are diverted to "earth ground," instead of rushing through all the scale electronics.

You see, Intalogix Technology has been engineered with one goal in mind — to prevent situations which may threaten the life, accuracy and performance of your scale. Thurman understands the importance of your scale to your operation. Do not wait until the damage has occurred. Put the shield of Intalogix Technology to work for you today and rest easy knowing that Thurman has you covered.

Intalogix Technology can be used in all makes of scales, new and old, including scales in which conventional instrumentation was previously used.
